

Connectivity Toolbox Data Flow Chart

Notes:
 The **Save/Save as** button will save the configurations in a .mat file (e.g., conn_test.mat), which can be loaded later (**Load** button in **SETUP** tab). The .mat file will be updated each time “**Done**” is pressed.

 Number of “SourceFolders” in “data/secondlevel/” will depend on the number of “Sources” selected in the **ANALYSES** tab.

Note: Use 'conn_displayroi' or 'conn_displaynetwork' and select ROI.mat file to display ROI-to-ROI or graph-theory second-level results (only needs this file's data)

Note: Use 'conn_display' and select SPM.mat within this folder to display whole-brain second-level results (only needs this folder's data)
